[Chase it](#)

Estimated sales per trading night to cover this period’s recorded costs: ₱8,118. You averaged **₱18,648**.

This estimate spreads the selected period’s recorded expenses across its trading days, using its recorded product margin. It is not a forecast; short periods containing rent or other large payouts can distort it.

How these numbers are worked out

Sales

Every bill closed in the period, including ones left unpaid. Voided lines are left out.

After cost of goods

Sales less what the food and drink cost to buy, at the cost on the day it was sold.

Expenses

Rent, wages, water, electricity and the like, dated by the night they were paid. Voided expenses are left out.

After recorded costs

After cost of goods, less expenses.

vs 1–27 Aug

Like for like: a whole month against the whole month before, a month to date against the same days of the month before, a week against the same weekdays a week earlier. Under one per cent either way reads as about the same.

Trading day

A night with at least one sale or a drawer count. Every per-day figure divides by trading days, not calendar days.

Break-even

What a night must take for the margin on it to cover the period's expenses spread evenly across its trading days. The day-of-week table measures against the same figure.

Tables

Hours held is wall clock, pauses included. In use is against 19 hours a trading day. Time sales is what the time was charged, a moved session split between its tables by minutes. Weakest is the table earning least per hour it was held — a premium table earning less than a standard one is a pricing question.

Products

From the prices and costs recorded at the moment of sale. Unsold stock is valued at its current average cost.

Given away

The dashboard's eight lines summed over the period. Comps are valued at current average cost, so that one is an estimate; the rest are exact.

Drawer

Variance is counted cash less what the drawer should have held. Negative is short.

Still owed

Unpaid bills open right now, by the night they were played. It moves when a debt is collected.
